Wireframe

C4D Event homepage: Calendar + List view (Month / Week)

Background

the calendar view was formerly available on the previous platform and planned to be developed. It's also been high in demand from 05 since the release in 03-2017. We need to deliver it both for internal (Groups/Project/Programmes) and external (global view) views.

User stories

User stories	AC	Comments
--------------	----	----------

US-1	As a visitor , I can view events in a calendar format , so that I can better visualize multiple events	<ul style="list-style-type: none"> • Visitor can switch between list and calendar view • Default calendar: per month • Visitor can select calendar view per week • Visitor can navigate to the next / previous months • Events listed in the calendar are formatted (BN-1) • By clicking an event in the calendar, visitor is lead to the detail page of this event • Visitor can only view published public events - other users can only view published events that they can access • Visitor is able to filter events in the calendar view by using search functions (facets, text search...) 	
US-2	As a Visitor , I can view global events in a calendar format, so that I can better visualize multiple events	<ul style="list-style-type: none"> • Visitor can view calendar format (US-1) • Visitor can view all published Group, Project, and Programme events • User can filter the calendar view by my interests, my groups, my projects 	projects is not yet applied to the overview on global calendar
US-3	As a Visitor , I can view Group /Project events in a calendar format, so that I can better visualize multiple events	<ul style="list-style-type: none"> • Visitor can view calendar format (US-1) • GO/GA and PO/PA can view unpublished (draft) events in the calendar 	draft events for GO/GA & PO/PA + global for SA
US-4	As a Visitor , I can download an event , so that I can import it to my own calendar	<ul style="list-style-type: none"> • Visitor is able to download an event using the ical format • Visitor is able to import ical file in his/her calendar 	

Business needs

Business needs		AC	Comments
BN-1	As capacity4dev , we want to format events listed in a calendar view, so that they appear nicely	<ul style="list-style-type: none"> • Each type of event (meeting + event + learning event) should be displayed in a different colour • Meetings should be ordered by start time 	
BN-2	As capacity4dev , we want to format concurrent events , so that they appear nicely and are readable	<ul style="list-style-type: none"> • Concurrent events should be listed one above another without any overlaps • The title of the event + event time should be truncated if it does not fit - the full title should appear on mouse over • If there are more than 3 concurrent events per day, add <u>more</u> link - additional events should appear on mouse over • event titles on mouse over can be clicked - leading the user to the detail event page • format applies to monthly and weekly views 	<p>similar to the outlook way of displaying events</p> <p>if it is not possible to do max 3 events then do nothing. but please look into it</p>

BN-3	As capacity4dev , we want to format ical events , to make them accessible and easy to use	<ul style="list-style-type: none"> • iCal events should include the following data: <ul style="list-style-type: none"> • title of the event + type of event • date / time: start + end • location (address) • description (body) • Organised by + Event website • link to detailed event on capacity4dev • iCal events should respect the time zone of the user (if unknown, use the time zone of the event) • iCal events should respect daylight savings • iCal events should be compatible with common desktop and mobile calendars, including (but not exclusive to) <ul style="list-style-type: none"> • Outlook calendar (Windows, Mac, Android, iOS) • Google calendar (Web, Android, iOS) • Apple calendar (Web, Mac, iOS) 	we will begin with exporting simple iCal events into a calendar - part of the next steps could include an iCal feed format so events are automatically updated in the calendar they are imported to.
BN-4	As capacity4dev , we want to include the total number of iCal downloads per Group in the Group export , so that we can analyse this data	<ul style="list-style-type: none"> • A column 'iCal downloads' is added in the Group export about the total number of iCal downloads per Group

Daniel Ilunga, Diane Kelecom - are these screens final or do we consider them more as wireframes and see where the contrib module brings us?

1. Diane Kelecom

Kevin Van Ransbeeck - these are there to provide an indication of the format, but they are not meant to represent the exact design. We are working on design separately, so for this phase, please use the existing colour palette and styling. The final design will not be ready before next year. Thanks

2. KVR

Decision was made during the sprint planning to create a calendar view without facets (full width). Active facets will be removed in calendar mode (all events will show). Extra filter on top (user interest/user groups) will also be removed.
