## Change on the Discussion detail page:

### Change on the photo/photo album detail page:

### Change on the overview pages:

## 2 Comments

### 1. Kevin Van Ransbeeck

Diane Kelecom / Daniel Ilunga what do you mean with:

- This should be reflected on the C4D Global and Group/Project search pages when using the '**Sort by: Date created**' feature and sorts by '**Recently updated**'

The way I understand is that if you sort on "date created", it should display the creation date and when you sort on "recently updated", it should display the last update time? This is technically possible, but there are two downsides:

1. We need to load both strings (uploaded a new document & updated a document) and both timestamps. Depending on the query parameters, only one will be printed out, but a minor performance overhead is added.
2. This is confusing for people. They see a message, and when they sort the list, suddenly the message changes, and the timestamp changes.

I agree that sorting on last update lacks visual feedback to the user (sort order won't be visible in the listed dates). But maybe this is something the new design can address, to display both dates in this view mode?

## **Diane Kelecom**

Kevin Van Ransbeeck as discussed in the stand up meeting this morning, we accept to keep the overview pages with the create date only - no change for overviews based on SolR. But the change should be reflected on the detail page
